MedCompass

Medication Therapy Management Module

- **Integrated retail/specialty pharmacy and care management solution built for both health plans and pharmacies.**
- **Prioritize and optimize all functions of Medication Management and Medication Therapy Management.**
- **An all-in-one platform to identify opportunities to improve care and enable pharmacists to perform and bill medical services.**

Medication Therapy Management for Health Plans

- The AssureCare Medication Therapy Management Module creates a member-centric solution for managing pharmacy services.
- Health plans receive data from PBMs for high visibility to members' pharmacy needs.
- Access to pharmacy data improves members' care management.
- Care managers can efficiently complete a medication reconciliation in a user-friendly screen. A health plan can extend our medication module into a medication therapy management program enabling health plan pharmacists to complete CMRs and TMRs.
- Enterprise reporting empowers health plans to understand members' pharmacy needs.
- Real-time benefits checks help ensure that prescriptions will be covered.

The Medication Therapy Management Module provides a complete solution that is designed to support a wide variety of reporting needs, including enterprise reporting, ad-hoc reporting, embedded reporting, and portal-based reporting. This enables organizations to deliver relevant information where needed across the entire enterprise.

Medication Therapy Management for Retail Pharmacies

- Pharmacists can efficiently complete Comprehensive Medication Reviews (CMRs), Targeted Medication Reviews (TMRs), and additional interventions. These encounters are configurable and can produce the data export of completed encounters to support the standard pharmacist eCare plan.
- Enables pharmacists to bill for medical services at the point of care, empowering pharmacists to practice at the top of their license and provide a revenue stream of payer reimbursement for pharmacies.

AssureCare's Medication Management Module is built specifically for health plans and retail/specialty pharmacies.

We are dedicated to improving patients' care coordination, increasing visibility to members' prescription needs, and helping pharmacist adhere to CMS compliance guidelines – while keeping the patient at the center of all we do.

Pharmacists - Use the Medication Therapy Management Module to individually assess each patient's medications, bill and perform medical services, and complete patient encounters.

Care Managers – Use the Medication Management Module to have a 360-degree view of the patient's medications, perform medication reconciliations, and identify efficacy or

Two Medication Management options to meet your needs

Our Medication Therapy Management Module allows health plans to receive pharmacy data through PBMs which permit case managers, health plan nurses, and pharmacists to assess member needs, reconcile medications, and complete CMRs & TMRs as needed. Pharmacists can undertake comprehensive & targeted medication review interventions to prevent medication-specific problems. Targeted interventions serve patients with chronic or high-risk care to increase medication adherence and ensure compliance. Health plans may benefit from pharmacist interventions as members' care coordination is improved.

Medication Therapy Management Program

Our Medication Therapy Management Program includes the features of the Module, but also consists of pharmacy networks for data exchange between health plans and pharmacists. The Program provides the ability for pharmacists to deliver onsite services such as vaccinations, and bill health plans for the medical visit associated with them and other clinical services. The Program also helps to identify patients who would be good candidates for pharmacogenomics, daily pill packaging, and other customized services.

The primary goal of MedCompass is to protect and secure client data. Embedded with the highest global standards, the HITRUST certification helps to achieve this goal by validating our platform is complaint to those benchmarks.

Population Health Management Prevalidation is designed to help health plans and other organizations identify health IT solutions that alleviate or increase the efficiency of administrative tasks to meet Population Health Management requirements in Health Plan Accreditation.
